

FIG. 10. Contour plot of the correlation between the first two principal components of the 200-hPa velocity potential and the 200-hPa velocity potential. Contour interval is 0.2. Shaded regions indicate areas where the correlation is statistically significant at the 95% level.

the 200-hPa velocity potential. The correlation is statistically significant at the 95% level in the shaded regions.

The correlation between the first two principal components of the 200-hPa velocity potential and the 200-hPa velocity potential is shown in Fig. 10. The correlation is statistically significant at the 95% level in the shaded regions.

The correlation between the first two principal components of the 200-hPa velocity potential and the 200-hPa velocity potential is shown in Fig. 10. The correlation is statistically significant at the 95% level in the shaded regions.
